RapidReach: Simple, Effective Emergency Notification since 1992.

RapidReach: In house System, may be linked to chlorine monitors for automatic activation

RapidReach ENS WEB: Offsite Subscription Service for Boil Orders with GIS

Call & Report: Field reporting, Dispatch & GPS for service personnel

Emergencies Call For Simple Tools

RapidReach is Simple

Construct and activate call outs in seconds. Call outs may be pre-staged and activated by telephone, email or with a few mouse clicks. A user with basic computer skills can easily build and maintain a notification program.

Security, Redundancy, Capacity

All Products in the RapidReach family are designed to provide secure, authoritative notification to any size list, via any means available. Access to the database is protected by Military Level security (RapidReach is proud to be listed on the DOD's Approved Product List). Our service operates with multiple redundant servers, and in high capacity telecom links so you never lose your notification ability.

How Fast?

RapidReach can handle hundreds or thousands of calls in minutes. For a community with 75,000 people can be warned of a threat to their water within an hour.

Emergency & Operational Notification

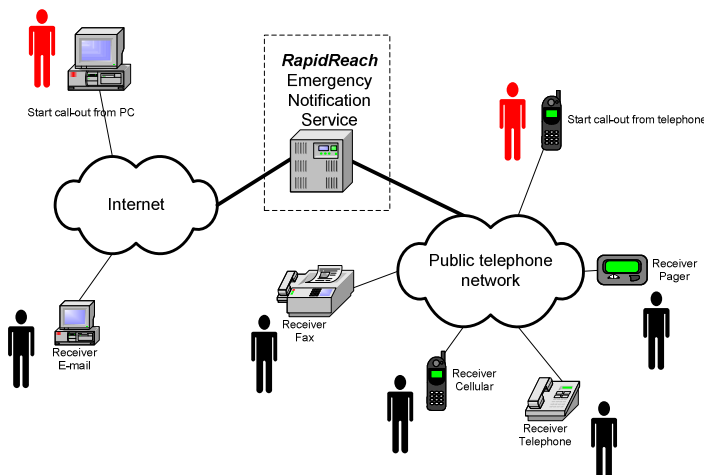

Internal Lists and Household phone numbers and addresses may be automatically updated from a database or other source.

RapidReach automates call lists by phones, pagers, fax, PDA's, email, alarm panels and AM Radio systems. **Call & Report** allows you to extend **RapidReach ENS WEB** and assign tasks or track personnel in the field.

Integration and Automation:

Options extend the functionality of a basic **RapidReach** system or subscription to ensure that the tool fits the job. **RapidReach** may be implemented for both large and small organizations and large or small emergencies – anywhere you need effective sophisticated notification. **RapidReach** doesn't replace other systems, just coordinates their use, so there is no new equipment to purchase.
